

Software Engineer with 7+ years across Atlassian, Meta, Elsevier and IBM, focused on platform architecture, system design and data-heavy product systems used at scale. I turn ambiguous backend and full-stack problems into reusable frameworks, faster workflows and measurable operational savings across Poland and the UK.

SELECTED ENGINEERING IMPACT

SCALE Shipped grid changes reaching 40K Jira Align users across 156 accounts ATLASSIAN	PERFORMANCE 4x faster inline saves; 70-80% faster async loads ATLASSIAN / META	EFFICIENCY 2,600 workflow hours and 2,500 workload hours saved monthly META	ARCHITECTURE Reusable renderer framework reducing custom renderer maintenance ATLASSIAN / META

EXPERIENCE

Atlassian Jira Align Gdańsk, Poland (Remote)	Software Engineer P40 2025 - Present Jira Align helps enterprises plan portfolios; I build grid editing and data-loading systems used across customer accounts. - Owned Inline Edit end-to-end for planning grids used by about 40K users across 156 production accounts, shipping the first single-select field and most of the first release scope. - Improved save latency by roughly 4x by replacing a 16-request edit flow with about 2 backend requests for customer-raised grid edits. - Designed a generic data-loading framework for custom fields, so new planning field types can be added through one reusable registration path. - Led a pre-release quality stream, closing 40% of issues in a six-person group, and hardened permission-aware data-loading paths to strengthen customer data protection. - Sustained about 100 merged PRs from Aug 2025 to Jun 2026 across grid editing, data loading and quality streams, using modern AI coding tools to accelerate delivery while maintaining code ownership and review quality.
Meta WhatsApp London, UK	Software Engineer IC4 2022 - 2024 WhatsApp Trust & Safety agents reviewed reported accounts, group chats and illegal or harmful content; I built tools that surfaced the context needed to investigate and action cases. - Reduced manual case-routing work by 75% across account access workflows, saving 2,600 reviewer workflow hours per month. - Rebuilt a React and GraphQL review tool used for about 20,000 Trust & Safety tickets per month, reducing async load times by 70-80%. - Built workflow automations saving 2,500 workload hours per month and highlighted policy terms across 16 Trust and Safety workflows and 60 queues. - Connected account, activity and group-chat context so reviewers could assess linked-user behavior when investigating CSAM and other illegal or harmful content. - Drove adoption of a shared component/layout framework, targeting a 90% reduction in custom renderers so non-technical teams could adapt review workflows.
Elsevier London, UK	Software Engineer IV 2020 - 2022 Elsevier Topics and Books support scholarly content discovery; I improved frontend performance and shared JavaScript services. - Reimplemented a publication-card layout library with SCSS and JavaScript, improving page load times by 15% and reducing bundle size by 5%. - Advocated and helped implement shared service libraries, moving common JavaScript service logic and tests into central repositories. - Enabled New Relic dashboards for production monitoring and alerting, and contributed to architecture discussions across content discovery products.
Elsevier London, UK	Software Engineer III 2019 - 2020 - Built a URL-to-PDF microservice for content delivery teams, letting them generate PDFs from existing web pages while reducing source-code complexity and traffic to the main service. - Worked across frontend, backend and AWS-backed services while progressing from SE III to SE IV.
IBM Hursley, UK	Software Engineer Placement Student 2017 - 2018 In an enterprise infrastructure placement, automated service migrations with Ansible and built a secure SFTP credential workflow, reducing tickets and improving operational clarity.

CORE SKILLS

Node · React · TypeScript · System Design · Python · C# · GraphQL · AWS · Next.js · REST APIs · SQL · PostgreSQL · Docker · CI/CD · Testing · PHP · Workflow Automation

ENGINEERING FOCUS

Platform architecture · System design · Rapid prototyping · Fast delivery · Performance optimization · Reusable frameworks · AI-assisted engineering

EDUCATION BSc (Hons) Computer Science

University of Greenwich
First Class Honours · 2015-2019

LANGUAGES

English · Polish · Spanish basic
